23. Problem: (use additional Sheets if necessary) The security package, Find_DDOS 4.2 was delivered and installed in the EDF, VATC, PVC and the DAACs to meet security requirements. With the subsequent delivery of the Firewall, this package was no longer required to meet security requirements. The freeware package was provided and supported by the FBI through 2002. However, the software currently is no longer under active development. Byron Peters and Henry Baez have reviewed this issue and agreed that the product should be removed.						
24. Proposed Solution: (use additional sheets if necessary) Test removal instructions with removal in EDF, PVC and VATC prior to submitting Tech Directive for removal. Instructions are provided for removal in VATC and PVC. Redlining of VATC removal instructions is requested., as this installation conforms to the installation instructions delivered with the most recent PSR delivery and this in the installation expected at the DAACs. Details are provided in the attached document.						
25. Alternate Solution: (use additional sheets if necessary) Continue to retain software with limited short or long-term benefit to the program.						
26. Consequences if Change(s) are not approved: (use additional sheets if necessary) Continue including software in EMD Software Processes, using resources that would be better directed to more productive purposes.						
27. Justification for Emergency (If Block 15 is "Emergency"):
